

CLIENT PROJECT

Menu, Activity and Resident Money Apps for UK Care Homes

A UK care home group with several homes and a central catering and accounts team

IN SHORT

Residents in a UK care home group now get meals that match their diet and texture rules, families see only consented photos, and every pound of pocket money is signed for.

THE CHALLENGE

Daily life in each home runs on menus that respect diet and texture rules, food orders approved centrally, activities matched to interests, and resident money spent on their behalf. Each needed records, signatures and family updates. Photo sharing had to respect each resident's media consent.

WHAT WE BUILT

We built a set of web and mobile apps around the group's care platform: a menu planner with relatives' meal choices and a belongings register, meal serving by wing, an offline-ready kitchen ordering app, an activities module with media consent, and petty cash and pocket money tabs with an accounts dashboard.

AT A GLANCE

INDUSTRY

Healthcare

SERVICES

Web application development

Mobile app development

Workflow automation

Custom software development

PLATFORMS

Web

Mobile

THE RESULT

Carers mark meals as served on mobile and record why when not. Chefs order and check in deliveries even offline. Activity photos reach families only where consent allows. Resident spending is signed, receipted and emailed to next of kin.

BUILT WITH

React, React Native, Node.js, Express.js, MongoDB, AWS, GitHub Actions, Git

KEY FEATURES

■ Menu planner with diet rules

Weekly menus respect each resident's diet type, allergies, portion size and food texture.

■ Meal serving by wing

Carers see each resident's chosen meal and texture and mark it served, or give a reason.

■ Interest-matched activities

Coordinators pick the interests an activity serves and the system suggests residents to invite.

■ Petty cash and pocket money

Cards are signed in and out of the safe, expenses need receipts, and next of kin are emailed on each resident expense.

■ Relatives choose meals

Relatives get a link and reminders to choose meals, and staff can choose on a resident's behalf.

■ Offline kitchen ordering

Chefs draft, submit and check in food orders offline, and the central team approves and places supplier orders.

■ Consent-checked photos

Photos are tagged to residents only where consent allows, and marketing sees only fully consented photos.

■ Accounts dashboard

Head office sees balances for every home and actions top-up requests from one queue.
