

CLIENT PROJECT

Exhibition registration software with barcode entry

A regional chamber of commerce in India

IN SHORT

Software and on-site support for a chamber of commerce exhibition: seminar registration, barcode entry, single-window desks and visitor feedback.

THE CHALLENGE

The chamber's annual exhibition ran a seminar program and a single-window help desk. Delegates registered online and on the day. The organizers needed attendance for every seminar, feedback from visitors and speakers, and a record of single-window visits.

WHAT WE BUILT

We implemented seminar and single-window management software and ran it on site. Online registrations came through the exhibition website and desks took walk-ins. Barcode scanners recorded seminar entry, tablets captured feedback, and audio and video teams recorded speaker feedback. We planned staff and hardware for each desk.

AT A GLANCE

INDUSTRY

Operations and logistics

SERVICES

Custom software development

Web application development

Software and AI consulting

PLATFORMS

Web

Tablet

THE RESULT

The organizers had one list of registered delegates, attendance for each seminar and feedback from visitors, speakers and dignitaries. Single-window desk visits were registered and counted.

BUILT WITH

React, Node.js, Express.js, MongoDB, Barcode scanners, Tablets, AWS, GitHub Actions, Git

KEY FEATURES

■ Online and on-site registration

Registrations from the exhibition website and from desks on the day, compiled into one delegate list.

■ Single-window desk

Registration and attendance records for the single-window help desk.

■ Speaker and dignitary feedback

Audio and video feedback recorded from speakers and dignitaries.

■ Barcode seminar entry

Scanners at seminar entry points recorded attendance for each session.

■ Tablet feedback

Tablets captured feedback from visitors and on the single-window service.

■ Desk resource plan

A desk-by-desk plan of staff, computers, tablets, scanners and printers, with on-site supervision by our team.
