

CLIENT PROJECT

Project Management System Built by Dedicated Developers on Retainer

An Indian services company

IN SHORT

An Indian company had its own project management system built by our developers on a monthly retainer, paying for the hours used each month.

THE CHALLENGE

The company needed a project management system for its own work. A fixed-price build was estimated at five to six months, and the company wanted a more flexible way to engage.

WHAT WE BUILT

We worked as the company's development team on a monthly retainer. The retainer covered a minimum of 65 developer hours a month, with extra hours billed as used and invoiced at month end.

AT A GLANCE

INDUSTRY

Operations and logistics

SERVICES

Custom software development

Web application development

Software and AI consulting

PLATFORMS

Web

THE RESULT

The company had its project management system developed in steps, paying for the hours used each month.

BUILT WITH

React, Node.js, Express.js, MongoDB, AWS, GitHub Actions, Git

KEY FEATURES

■ Monthly retainer

A minimum of 65 developer hours a month, with extra hours billed at an agreed rate.

■ Monthly invoicing

Work is invoiced at the end of each month for the hours used.

■ Built in steps

The system was developed step by step against the company's priorities, so it paid for the hours used each month.
