

CLIENT PROJECT

QuickBooks API integration for custom business software

A business in the United States

IN SHORT

We connected a US business's own system to QuickBooks, so financial data entered once reaches the accounts without retyping.

THE CHALLENGE

The business was keying the same financial data into its own system and into QuickBooks.

WHAT WE BUILT

We built an integration between the business's system and QuickBooks using the QuickBooks API.

THE RESULT

Financial data entered in the business's system reaches QuickBooks without being typed in twice.

AT A GLANCE

INDUSTRY

Operations and logistics

SERVICES

Workflow automation

Custom software development

PLATFORMS

Web

QuickBooks Online

Read the full project: <https://itechnosol.com/our-work/quickbooks-integration-us-business/>

BUILT WITH

Node.js, Express.js, QuickBooks
Online API, OAuth 2.0, Webhooks,
AWS, GitHub Actions, Git

KEY FEATURES

■ **System-to-QuickBooks connection**

The business's own system passes financial data to QuickBooks through its API.

■ **No double entry**

Staff enter the data once instead of in two places.

■ **QuickBooks stays the books**

The accounts are still kept in QuickBooks, filled by the integration rather than by retyping.
