

CLIENT PROJECT

Mobile app integration for an existing school ERP

A school ERP provider in India

IN SHORT

Schools using an Indian school ERP can now reach the same records from a phone, through a mobile app connected to the provider's existing system.

THE CHALLENGE

A school ERP provider needed a mobile app so schools could use its system from a phone, not only a desktop.

WHAT WE BUILT

We built the mobile app for the provider's school ERP, connected to the existing system.

THE RESULT

Schools using the ERP can reach it from a phone.

AT A GLANCE

INDUSTRY

Education

SERVICES

Mobile app development

ERP development

PLATFORMS

Android

iOS

BUILT WITH

React Native, Node.js, Express.js,
MongoDB, Firebase, AWS, GitHub
Actions, Git

KEY FEATURES

■ **Mobile access to the ERP**

The school ERP is available in a phone app, not only on a desktop.

■ **One set of school data**

The app works from the same school data as the desktop system, so there is no copy to keep in step.

■ **Connected to the existing system**

The app works with the provider's ERP instead of running as a separate product.
