PROJECT OVERVIEW

Encrypted video calls for a secure collaboration app

Video calls, screen sharing and meetings inside the app on web, Android and iOS, under the same security controls that protect its data.

Encrypted video calls for a secure collaboration app

Video calls, screen sharing and meetings inside the app on web, Android and iOS, under the same security controls that protect its data.

CLIENT

Secure collaboration software

INDUSTRY

Software products and SaaS

PLATFORMS

Web, Android, iOS

THE REQUIREMENT

Users of the client's app had to switch to separate video apps to talk, which took their conversations outside the app's security controls.

WHAT WE BUILT

We built video calls, screen sharing and meetings into the app, alongside end-to-end encryption, a two-level PIN and locked folders that stay hidden until the admin grants access.

THE OUTCOME

Teams now meet, share screens and run demos inside the app, under the same security controls that protect their data.

30 min

saved per user each day, the client's own estimate

What it does

In short: video calls inside the app, encrypted.

✓ In-app video calls and meetings

Teams meet, check in and run live demos without opening another app.

✓ End-to-end encryption and a two-level PIN

Conversations and stored information stay protected.

✓ Re-sharing controls

Forwarding can be blocked user by user, so information goes only where it should.

✓ One-click save and share

Save what you copy, or send one item to several channels, in a single click.

✓ Screen sharing

Explain a task by showing it on screen instead of describing it.

✓ Admin-controlled locked folders

Sensitive folders stay hidden until the admin grants access.

✓ Search and filters

Saved or tagged information turns up in a few keystrokes.

✓ Employee handover

Information moves from a departing user to their successor inside the app.

BUILT WITH

PLATFORMS

SERVICES

How a project runs

The same four stages for every project, with working software early and the option to stop after any stage.

STAGE 1

Audit

We map the current process and agree on a first release.

STAGE 2

Trial

A working version on your data before the full build.

STAGE 3

Build

Weekly working demos, integrated with your systems.

STAGE 4

Go live

Rollout to one team, then company-wide.

INCLUDED IN EVERY QUOTATION

- ✓ Written scope with dated milestones
- ✓ Testing before delivery
- ✓ Documentation for your team
- ✓ Weekly working demo
- ✓ Code in your repository from day one
- ✓ Free bug fixes in the warranty period after launch

OUR PROMISES

- NDA before anything
- You own all the code
- Your first call is with a founder

Planning something similar?

Send us a few lines about your project. A founder replies within 4 business hours with an indicative cost and timeline, free and with no obligation.
